ADDENDUM NO. 2  

to the  
CONTRACT DOCUMENTS  

August 16, 2012  

I. Bidder acknowledges that it is the Bidder’s responsibility to ascertain whether any Addenda have been issued and if so, to obtain copies of such Addenda. Bidder therefore agrees to be bound by all Addenda that have been issued for this bid.

This Addendum forms a part of the Contract Documents and modifies the original Bidding Documents. The following changes, additions, or deletions shall be made to the following documents as indicated and all other Contract Documents shall remain the same.

II. BIDDING/CONTRACT DOCUMENTS AND DIVISION 1 SPECIFICATIONS – VOLUME 1  
A. **BID FORM**  
   1. Replace Bid Form with bid form attached to this Addenda

III. CLARIFICATIONS  
A. **PRE-BID QUESTIONS**  
   NONE

IV. SPECIFICATIONS  
A. **ADD THE FOLLOWING SPECIFICATION SECTION**  
   1. SECTION 21 13 13 - SPRINKLER SYSTEM, FIRE PROTECTION

B. **REVISE THE FOLLOWING SPECIFICATION SECTION**  
   1. SECTION 01 23 00 ALTERNATES

   1.2 DESCRIPTION OF ALTERNATES
   A. (ADD#2) Additive Alternate No. 1: Provide an alternate acoustical wall panel layout as shown on drawing Sheet A-272(a). DELETE work shown on drawing Sheet A-272 for this bid alternate pricing. (To price this bid alternate, deduct the cost for work shown on drawing Sheet A-272 from the cost of work shown on drawing Sheet A-272(a). (ADD#2)
2. Specification Section 26 51 00 – Interior Lighting

V. DRAWING SHEETS - Replace the following sheets with the drawings attached to this Addenda.

A. RE-ISSUE THE FOLLOWING DRAWING SHEETS

   See drawings for clouded and called out Addendum #2 changes.
   1. A-071, COVER SHEET SYMBOLS NOTES AND SCHEDULE
   2. A-171, EXISTING FLOOR PLANS & REFLECTED CEILING PLANS
   3. A-172, EXISTING INTERIOR ELEVATIONS
   4. A-271, NEW FLOOR PLANS & REFLECTED CEILING PLANS
   5. A-272, NEW INTERIOR ELEVATIONS
   6. A-272(a), NEW INTERIOR ELEVATIONS (BID ALTERNATE)
   7. A-571, CLASSROOM REMODEL DETAILS

June 6, 2011 Bid Form
Revision: 4 ADDENDUM 2 01011.01
LF: BID-FORM Page 1 of 7
1.0 **BIDDER'S REPRESENTATIONS**  
Bidder, represents that a) Bidder and all Subcontractors, regardless of tier, has the appropriate current and active Contractor's license required by the State of California and the Bidding Documents; b) it has carefully read and examined the Bidding Documents for the proposed Work on this Project; c) it has examined the site of the proposed Work and all Information Available to Bidders; d) it has become familiar with all the conditions related to the proposed Work, including the availability of labor, materials, and equipment. Bidder hereby offers to furnish all labor, materials, equipment, tools, transportation, and services necessary to complete the proposed Work on this Project in accordance with the Contract Documents for the sums quoted. Bidder further agrees that it will not withdraw its Bid within 60 days after the Bid Deadline, and that, if it is selected as the apparent lowest responsive and responsible Bidder, that it will, within 10 days after receipt of notice of selection, sign and deliver to University the Agreement in triplicate and furnish to University all items required by the Bidding Documents. If awarded the Contract, Bidder agrees to complete the Work within **XX** calendar days after the date of commencement specified in the Notice to Proceed.

2.0 **ADDENDA**  
Bidder acknowledges that it is Bidder's responsibility to ascertain whether any Addenda have been issued and if so, to obtain copies of such Addenda from University's Facility at the appropriate address stated on Page 1 of the Advertisement for Bids. Bidder therefore agrees to be bound by all Addenda that have been issued for this Bid.

3.0 **(NOT USED)**

4.0 **LUMP SUM BASE BID**

\[
\text{
$ \underline{\hspace{2cm}} , \underline{\hspace{2cm}} , \underline{\hspace{2cm}} . \underline{\hspace{2cm}}$
}
\]

(Place figures in appropriate boxes.)

Bidder shall also include in the LUMP SUM BASE BID the following allowance: **NOT USED**

5.0 **SELECTION OF APPARENT LOW BIDDER**  
Refer to the Instructions to Bidders for selection of apparent low bidder.

6.0 **UNIT PRICES (NOT USED)**
7.0 **DAILY RATE OF COMPENSATION FOR COMPENSABLE DELAYS**

Bidder shall determine and provide in the space below, the daily rate of compensation for any compensable delay caused by University at any time during the performance of the Work:

**(MINIMUM AMOUNT ALLOWED IS $1.00. Failure to fill in a dollar figure for the daily rate for Compensable Delay at or greater than the Minimum Compensable Daily Rate shall render the bid non-responsive.)**

\[
\text{\$} \quad \quad , \quad \quad . \quad \quad \times \quad \quad 10 \quad \quad \text{multiplier}
\]

(Place figures in appropriate boxes.)

Failure to fill in a dollar figure for the daily rate for Compensable Delay shall render the bid non-responsive. University will perform the extension of the daily rate times the multiplier.

The daily rate shown above will be the total amount of Contractor entitlement for each day of Compensable Delay caused by University at any time during the performance of the Work and shall constitute payment in full for all delay costs, direct or indirect (including, without limitation, compensation for all extended home office overhead and extended general conditions), of the Contractor and all subcontractors, suppliers, persons, and entities under or claiming through Contractor on the Project. The number of days of Compensable Delay shown as a "multiplier" above is not intended as an estimate of the number of days of Compensable Delay anticipated by the University. The University will pay the daily rate of compensation only for the actual number of days of Compensable Delay, as defined in the General Conditions; the actual number of days of Compensable Delay may be greater or lesser than the "multiplier" shown above.

8.0 **ALTERNATES**

In order for a Bid to be responsive, Bidder must submit bid for Alternates listed below. The failure to do so shall result in the Bid being rejected as non-responsive.

**ALTERNATE #1**
DESCRIPTION: Alternate acoustical wall panel layout

ADD or DEDUCT

9.0 LIST OF SUBCONTRACTORS

Bidder will use Subcontractors for the Work: (Yes or No) _____________

If yes, provide in the spaces below (a) the name and the location of the place of business of each subcontractor who will perform work or labor or render service to the prime contractor in or about the construction of the work or improvement, or a subcontractor licensed by the state of California who, under subcontract to the prime contractor, specifically fabricates and installs a portion of the work or improvement according to detailed drawings contained in the plans and specifications, in an amount in excess of 1/2 of 1 percent of the prime contractor's total bid, (b) the portion of the work which will be done by each subcontractor. The prime contractor shall list only one subcontractor for each such portion as is defined by the prime contractor in its bid.

SECTION 01 23 00
ALTERNATES

PART 1 - GENERAL

1.1 ALTERNATES REQUIREMENTS

A. This Section identifies each Alternate and describes basic changes to the Work only when that Alternate is made a part of the Work by specific provision in the Agreement.

B. The Lump Sum Base Bid and Alternates shall include the costs of all supporting elements required, so that the combination of the Lump Sum Base Bid and any Alternates shall be complete. The scope of Work for all Alternates shall be in accordance with applicable Drawings and Specifications.

C. Except as otherwise specifically provided by University, the Work described in Alternates shall be completed with no increase in Contract Time.

D. This Section includes only the non-technical descriptions of the Alternates. Refer to the specific Sections of Divisions 2-33 of the Specifications for technical descriptions of the Alternates.

E. Coordinate related Work and modify surrounding Work as required to properly and completely integrate the Alternates into the Work.

1.2 DESCRIPTION OF ALTERNATES

A. Alternate No. 1:

1. Provide an alternate acoustical wall panel layout as shown on drawing sheet A-272(a).

DELETE work shown on drawing Sheet A-272 for this bid alternate pricing. (To price this bid alternate, deduct the cost for work shown on drawing Sheet A-272 from the cost of work shown on drawing Sheet A-272(a)  ADDENDUM 2

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 01 23 00
SECTION 21 1313

SPRINKLER SYSTEM, FIRE PROTECTION

PART 1 GENERAL

1.01 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY
   A. Work Included: Design and build installation of piping and sprinkler to cover the UPS
      enclosure. Furnish piping offsets, fittings, and any other accessories as required to
      provide a complete installation and to eliminate interference with other construction. Install
      sprinkler to provide coverage in the UPS enclosure area. New piping and sprinkler to
      match existing building system. Except as modified herein, the system shall be designed
      and installed in accordance with NFPA 13. Design the sprinkler system including locating
      sprinklers, piping and equipment, and size piping and equipment. The design of the
      sprinkler system shall be based on hydraulic calculations, and the other provisions
      specified herein.

1.03 REFERENCES
   A. The publications listed below form a part of this specification to the extent referenced. The
      publications are referred to within the text by the basic designation only.

      NATIONAL FIRE PROTECTION ASSOCIATION (NFPA)
      NFPA 13 (2010; Errata 10-1; TIA 10-1) Installation of Sprinkler Systems

      Ductile-Iron Pressure Pipe and Fittings
      Cast

      ASME INTERNATIONAL (ASME)
      Fittings; Classes 125 and 250
1.04 SUBMITTALS

1.4.1 Hydraulic Design

Hydraulically design the system per UFC 3-600-01 and NFPA 13.

1.4.2 Hydraulic Calculations

Prepare hydraulic calculations as outlined in NFPA 13, except that calculations shall be performed by computer using software intended specifically for fire protection system design using the design data shown on the drawings. Software that uses k-factors for typical branch lines is not acceptable. Indicate the diameter, length, flow, velocity, friction loss, number and type fittings, total friction loss in the pipe, equivalent pipe length and Hazen-Williams coefficient for each pipe. A drawing showing hydraulic reference points (nodes) and pipe designations used in the calculations shall be included and shall be independent of shop drawings.

1.4.3 Sprinkler Coverage

Sprinklers shall provide coverage in the UPS enclosure in accordance with NFPA 13. Coverage per sprinkler shall be in accordance with NFPA 13.

1.05 SUBMITTALS

A. Shop Drawings

Three copies of the Sprinkler System Shop Drawings, no later than 21 days prior to the start of sprinkler system installation.

B. As-Built Drawings

As-built shop drawings, at least 14 days after completion of the Final Tests, updated to reflect as-built conditions after all related work is completed.

C. Design Data

Hydraulic calculations, including a drawing showing hydraulic reference points and pipe segments.

1.06 QUALITY ASSURANCE

A. Compliance with referenced NFPA standards is mandatory. This includes advisory provisions listed in the appendices of such standards, as though the word "shall" had been substituted for the word "should" wherever it appears. In the event of a conflict between specific provisions of this specification and applicable NFPA standards, this specification shall govern. Reference to "authority having jurisdiction" shall be interpreted to mean the Design Builder.
1.6.1 Sprinkler System Installer

Work specified in this section shall be performed by the Sprinkler System Installer who is regularly engaged in the installation of the type and complexity of system specified in the contract documents, and shall have served in a similar capacity for at least three systems that have performed in the manner intended for a period of not less than 6 months.

1.07 PRODUCT HANDLING

A. Storage of Materials:
   1. Store only acceptable Project materials on Project site.
   2. Store in suitable location.
   3. Restrict storage to paint materials and related equipment.
   4. Comply with health and fire regulations.

PART 2 PRODUCTS

2.1 STANDARD PRODUCTS

Provide materials and equipment which are standard products of a manufacturer regularly engaged in the manufacture of such products and that essentially duplicate items that have been in satisfactory use for at least 2 years prior to bid opening.

2.2 NAMEPLATES

All equipment shall have a nameplate that identifies the manufacturer's name, address, type or style, model or serial number, and catalog number.

2.3 REQUIREMENTS FOR FIRE PROTECTION SERVICE

Provide Materials and Equipment that have been tested by Underwriters Laboratories, Inc. and are listed in UL Fire Prot Dir or approved by Factory Mutual and listed in FM P7825a and FM P7825b. Where the terms "listed" or "approved" appear in this specification, such shall mean listed in UL Fire Prot Dir or FM P7825a and FM P7825b.

2.4 ABOVEGROUND PIPING COMPONENTS

Aboveground piping shall be steel or plastic.

2.5 Steel Piping Components

2.5.1 Steel Pipe

Except as modified herein, steel pipe shall be Schedule 40, and shall conform to applicable provisions of ASTM A 795/A 795M, ASTM A 53/A 53M, or ASTM A 135/A 135M. Pipe shall be marked with the name of the manufacturer, kind of pipe, and ASTM designation. Schedule 10 piping shall be permitted for sizes larger than two inches.
2.5.2 Fittings for Non-Grooved Steel Pipe

Fittings shall be cast iron conforming to ASME B16.4, steel conforming to ASME B16.9 or ASME B16.11, or malleable iron conforming to ASME B16.3.

Fittings into which sprinklers, drop nipples or riser nipples (sprigs) are screwed shall be threaded type. Plain-end fittings with mechanical couplings, fittings that use steel gripping devices to bite into the pipe and segmented welded fittings shall not be used.

2.5.3 Grooved Mechanical Joints and Fittings

Joints and fittings shall be designed for not less than 175 psi service and shall be the product of the same manufacturer; segmented welded fittings shall not be used. Fitting and coupling houses shall be malleable iron conforming to ASTM A 47/A 47M, Grade 32510; ductile iron conforming to ASTM A 536, Grade 65-45-12. Gasket shall be the flush type that fills the entire cavity between the fitting and the pipe. Nuts and bolts shall be heat-treated steel conforming to ASTM A 183 and shall be cadmium plated or zinc electroplated.

2.5.4 Flanges

Flanges shall conform to NFPA 13 and ASME B16.1. Gaskets shall be non-asbestos compressed material in accordance with ASME B16.21, 1/16 inch thick, and full face or self-centering flat ring type.

2.5.5 Bolts, Nut, and Washers

Bolts shall be conform to ASTM A 449, Type 1 and shall extend no less than three full threads beyond the nut with bolts tightened to the required torque. Nuts shall be hexagon type conforming to ASME B18.2.2, ASTM A 193/A 193M, Grade 5 or ASTM A 563, Grade C3, DH3. Washers shall meet the requirements of ASTM F 436. Flat circular washers shall be provided under all bolt heads and nuts.

2.5.6 Pipe Hangers

Hangers shall be listed in UL Fire Prot Dir or FM P7825a and FM P7825b and of the type suitable for the application, construction, and pipe type and sized to be supported.

2.5.7 Valves

2.5.7.1 Control Valve and Gate Valve

Manually operated sprinkler control valve and gate valve shall be outside stem and yoke (OS&Y) type and shall be listed in UL Bld Mat Dir or FM P7825a and FM P7825b.

2.5.7.2 Check Valve

Check valve 2 inches and larger shall be listed in UL Bld Mat Dir or FM P7825a and FM P7825b. Check valves 4 inches and larger shall be of the swing type with flanged cast
iron body and flanged inspection plate, shall have a clear waterway and shall meet the requirements of MSS SP-71, for Type 3 or 4.

2.6 ALARM CHECK VALVE ASSEMBLY
Assembly shall include a check valve, standard trim piping, pressure gauges, bypass, testing valves, main drain, and other components as required for a fully operational system.

2.10 SPRINKLERS
Sprinklers with internal O-rings shall not be used. Sprinklers shall be used in accordance with their listed coverage limitations. Temperature classification shall be ordinary. Sprinklers in high heat areas shall have temperature classification in accordance with NFPA 13. Extended coverage sprinklers shall not be used.

2.10.1 Pendent Sprinkler
Pendent sprinkler shall be of the fusible strut or glass bulb type, quick-response type with nominal 1/2 inch orifice. Pendent sprinklers shall have a white polyester finish.

2.10.2 Upright Sprinkler
Upright sprinkler shall be brass and shall have a nominal 1/2 inch orifice.

2.10.3 Dry Sprinkler Assembly
Dry sprinkler assembly shall be of the sidewall type as indicated. Assembly shall include an integral escutcheon. Maximum length shall not exceed maximum indicated in UL Fire Prot Dir.

2.11 DISINFECTING MATERIALS

2.11.1 Liquid Chlorine
Liquid chlorine shall conform to AWWA B301.

2.11.2 Hypochlorites
Calcium hypochlorite and sodium hypochlorite shall conform to AWWA B300.
PART 3 EXECUTION

3.01 FIELD MEASUREMENTS

After becoming familiar with all details of the work, verify all dimensions in the field, and advise the University of any discrepancy before performing the work.

3.02 INSTALLATION REQUIREMENTS

The installation shall be in accordance with the applicable provisions of NFPA 13, NFPA 24 and publications referenced therein.

3.03 ABOVEGROUND PIPING INSTALLATION

3.03.1 Protection of Piping Against Earthquake Damage

Seismically protect the system piping against damage from earthquakes. This requirement is not subject to determination under NFPA 13. Install the seismic protection of the system piping in accordance with UFC 3-310-04, NFPA 13 and Annex A. Include the required features identified therein that are applicable to the specific piping system.

3.03.2 Piping in Exposed Areas

Install exposed piping without diminishing exit access widths, corridors or equipment access. Exposed horizontal piping, including drain piping, shall be installed to provide maximum headroom.

3.03.3 Piping in Finished Areas

In areas with suspended or dropped ceilings and in areas with concealed spaces above the ceiling, piping shall be concealed above ceilings. Piping shall be inspected, tested and approved before being concealed. Risers and similar vertical runs of piping in finished areas shall be concealed.

3.03.4 Pendent Sprinklers

Drop nipples to pendent sprinklers shall consist of minimum 1 inch pipe with a reducing coupling into which the sprinkler shall be threaded. Hangers shall be provided on arm-overs to drop nipples supplying pendent sprinklers when the arm-over exceeds 12 inches for steel pipe or 6 inches for copper tubing.

3.03.5 Upright Sprinklers

Riser nipples or "sprigs" to upright sprinklers shall contain no fittings between the branch line tee and the reducing coupling at the sprinkler. Riser nipples exceeding 30 inches in length shall be individually supported.
3.03.6 Pipe Joints

Pipe joints shall conform to NFPA 13, except as modified herein. Not more than four threads shall show after joint is made up. Welded joints will be permitted, only if welding operations are performed as required by NFPA 13 at the Contractor's fabrication shop, not at the project construction site. Flanged joints shall be provided where indicated or required by NFPA 13. Grooved pipe and fittings shall be prepared in accordance with the manufacturer's latest published specification according to pipe material, wall thickness and size. Grooved couplings, fittings and grooving tools shall be products of the same manufacturer. For copper tubing, pipe and groove dimensions shall comply with the tolerances specified by the coupling manufacturer. The diameter of grooves made in the field shall be measured using a "go/no-go" gauge, vernier or dial caliper, narrow-land micrometer, or other method specifically approved by the coupling manufacturer for the intended application. Groove width and dimension of groove from end of pipe shall be measured and recorded for each change in grooving tool setup to verify compliance with coupling manufacturer's tolerances. Grooved joints shall not be used in concealed locations, such as behind solid walls or ceilings, unless an access panel is shown on the drawings for servicing or adjusting the joint.

3.03.7 Reducers

Reductions in pipe sizes shall be made with one-piece tapered reducing fittings. The use of grooved-end or rubber-gasketed reducing couplings will not be permitted. When standard fittings of the required size are not manufactured, single bushings of the face type will be permitted. Where used, face bushings shall be installed with the outer face flush with the face of the fitting opening being reduced. Bushings shall not be used in elbow fittings, in more than one outlet of a tee, in more than two outlets of a cross, or where the reduction in size is less than 1/2 inch.

3.03.8 Pipe Penetrations

Cutting structural members for passage of pipes or for pipe-hanger fastenings will not be permitted. Pipes that must penetrate concrete or masonry walls or concrete floors shall be core-drilled and provided with pipe sleeves. Each sleeve shall be Schedule 40 galvanized steel, ductile iron or cast iron pipe and shall extend through its respective wall or floor and be cut flush with each wall surface. Sleeves shall provide required clearance between the pipe and the sleeve per NFPA 13. The space between the sleeve and the pipe shall be firmly packed with mineral wool insulation. Where pipes penetrate fire walls, fire partitions, or floors, pipes shall be fire stopped in accordance with Section 07 84 00 FIRESTOPPING. In penetrations that are not fire-rated or not a floor penetration, the space between the sleeve and the pipe shall be sealed at both ends with plastic waterproof cement that will dry to a firm but pliable mass or with a mechanically adjustable segmented elastomer seal.

3.03.9 Escutcheons

Escutcheons shall be provided for pipe penetration of ceilings and walls. Escutcheons shall be securely fastened to the pipe at surfaces through which piping passes.
3.03.10 Hydrostatic Testing

Aboveground piping shall be hydrostatically tested in accordance with NFPA 13 at not less than 200 psi or 50 psi in excess of maximum system operating pressure and shall maintain that pressure without loss for 2 hours. There shall be no drop in gauge pressure or visible leakage when the system is subjected to the hydrostatic test. The test pressure shall be read from a gauge located at the low elevation point of the system or portion being tested.

END OF SECTION
SECTION 26 5100

INTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Existing interior ceiling mounted room lighting fixtures, lamps, and ballasts. (Identified as F74C on original building drawings)
2. Existing interior wall mounted white board lighting units, lamps, and ballasts. (Identified as F23B on original building drawings)
3. Existing illuminated exit signs.
4. Lighting fixture supports
5. Existing and new lighting control systems which may include control modules, power packs, dimming ballasts, occupancy sensors, light level sensors and switches.

1.2 DEFINITIONS

A. BF: Ballast factor.
B. CRI: Color-rendering index.
C. CU: Coefficient of utilization.
D. HID: High-intensity discharge.
E. LER: Luminaire efficacy rating.
F. Luminaire: Complete lighting fixture, including ballast housing if provided.
G. RCR: Room cavity ratio.

Unless otherwise specified or indicated, electrical and electronic terms used in these specifications, and on the drawings, shall be as defined in IEEE 100.

Average life is the time after which 50 percent will have failed and 50 percent will have survived under normal conditions.

1.3 SUBMITTALS

A. Product Data: For each type of lighting fixture component replaced or added for a complete installation. Include data on features, accessories, finishes, and the following:

1. Physical description of component including dimensions. This information may be supplemented by catalog data, and shall contain a list of vendors with vendor part numbers.
2. Environment information: Submit documentation that includes contact information, summary of procedures, and the limitations and conditions applicable to the project. Indicate manufacturer's commitment to reclaim materials for recycling and/or reuse. Documentation indicating distance between manufacturing facility and the project site. Indicate distance of raw material origin from the project site. Indicate relative dollar value of local/regional materials to total dollar value of products included in project.

3. Operation and maintenance data for all replaced and new components as noted on the drawings which may include light fixtures, control modules, control zones, occupancy sensors, light level sensors, power packs, dimming ballasts, schematic diagrams and all interconnecting control wire, conduit, and associated hardware.

4. Regulatory requirements: Equipment, materials, installation, and workmanship shall be in accordance with the provisions of NFPA 70 and NFPA 101, unless more stringent requirements are required by the manufacturer or university standards.

5. New lamps and/or ballasts.

B. Shop Drawings: Show details of all systems and components added for a complete lighting fixture system as noted and shown on drawings. Indicate dimensions, weights, methods of field assembly, components, features, and accessories.

   1. Wiring Diagrams: Power and control wiring. Clearly indicate how existing systems shall be adjusted and how new connections shall be made to existing systems.

C. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

   1. Existing lighting fixture bracing through new ceiling.
   2. Structural members to which suspension systems for lighting fixtures will be attached and the attachment method.
   3. Other items in finished ceiling including the following:

      a. Piping.
      b. Sprinklers.
      c. Smoke and fire detectors.
      d. Occupancy sensors.

1.4 COORDINATION

A. Coordinate layout and installation of lighting fixture bracing and suspension system with other construction that penetrates the new ceiling or is supported by them, including piping and supports, HVAC equipment, fire-suppression system, and partition assemblies.

1.5 WARRANTY

A. The equipment items and components shall be supported by service organizations which are reasonably convenient to the equipment installation in order to render satisfactory service to the equipment on a regular and emergency basis during the warranty period of the contract.
B. Special Warranty for Ballasts: Manufacturer's standard form in which ballast manufacturer agrees to repair or replace ballasts that fail in materials or workmanship within specified warranty period.

1. Warranty Period for new Electronic Ballasts: Five years from date of Substantial Completion. Ballast assembly in the lighting fixture, transportation, and on-site storage shall not exceed 12 months, thereby permitting 4 years of the ballast 5 year warranty to be in service and energized. The warranty shall state that the malfunctioning ballast shall be exchanged by the manufacturer and promptly shipped to the using facility. The replacement ballast shall be identical to, or an improvement upon, the original design of the malfunctioning ballast.

PART 2 - PRODUCTS

2. LIGHTING FIXTURES AND COMPONENTS, GENERAL REQUIREMENTS

A. Lighting Fixtures: Clean and repair all existing fixtures and components to like-new condition. Replace existing fixtures and components which cannot be satisfactorily repaired with units that match original design.

B. Metal Parts: Free of burrs and sharp corners and edges.

C. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.

D. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.

E. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:

1. White Surfaces: 85 percent.
2. Specular Surfaces: 83 percent.
3. Diffusing Specular Surfaces: 75 percent.
4. Laminated Silver Metallized Film: 90 percent.

F. Plastic Diffusers, Covers, and Globes:

1. Replace damaged units with matching ones that have high resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
   a. Lens Thickness: Typically 0.125 inch (3.175 mm) minimum, unless different thickness is indicated by manufacturer.
   b. UV stabilized.
2. Glass: Annealed crystal glass, unless otherwise indicated.

G. Electromagnetic-Interference Filters: Factory installed to suppress conducted electromagnetic-interference as required by MIL-STD-461E. Fabricate lighting fixtures with one filter on each
ballast as provided on original installation. (Note: These filters are required only on new ballasts and only if provided in original installation.)

2.2 FLUORESCENT LAMP ELECTRONIC BALLAST

A. Fluorescent fixtures shall have electronic ballasts unless specifically indicated otherwise, UL 1598.

B. The electronic ballast shall as a minimum meet the following characteristics:

1. Ballast shall comply with UL 935, ANSI C82.11, NFPA 70, and CEC Title 24.
2. Sound Rating: A.
3. Total Harmonic Distortion Rating: Less than 15 percent.
4. Transient Voltage Protection: IEEE C62.41, Category A or better.
5. Lamp Current Crest Factor: 1.5 or less.
6. Power Factor: .90 or higher.
7. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for non-consumer equipment.
8. Protection: Class P thermal cutout.
9. Each ballast shall have circuit diagrams and lamp connections displayed on the ballast.
10. Ballasts shall be designed for the wattage of the lamps used in the indicated application.
11. Ballasts shall be designed to operate on the voltage system to which they are connected.

2.3 EMERGENCY LIGHTING UNITS AND EXIT SIGNS

A. Description: Self-contained units complying with UL 924 for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.

1. Battery: Sealed, maintenance-free, lead-acid type.
2. Charger: Fully automatic, solid-state type with sealed transfer relay.
3. Operation: Relay automatically turns lamp on when power supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
5. LED Indicator Light: Indicates normal power on. Normal glow indicates charging at end of discharge cycle.
6. Wire Guard: Heavy-chrome-plated wire guard protects lamp heads or fixtures.
7. Integral Time-Delay Relay: Holds unit on for fixed interval of 15 minutes when power is restored after an outage.
8. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
9. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.
2.4 LABELS AND FINISH

A. Provide labeled luminaires in accordance with UL 1598 requirements. All luminaires shall be clearly marked for operation of specific lamps and ballasts according to proper lamp type. All markings related to lamp type shall be clear and located to be readily visible to service personnel. Ballasts shall have clear markings indicating multi-level outputs and indicate proper terminals for the various outputs.

B. Electrical equipment shall have factory-applied painting systems which shall, as a minimum, meet the requirements of NEMA 250 corrosion-resistance test.

2.5 LIGHTING FIXTURE SUPPORT COMPONENTS

A. Provide all necessary new hardware to install and secure lighting fixtures with fixture supports for conditions indicated on drawings. Each fixture to have a short pigtail with appropriate plug. A mating receptacle will be installed near each fixture to plug fixture into. This will allow easy removal of fixture for maintenance at floor level rather than from ladder.

B. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.

C. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

D. Suspended fixtures: Provide hangers capable of supporting twice the combined weight of fixtures supported by hangers. Provide with swivel hangers to ensure a plumb installation. Hangers shall be cadmium-plated steel with a swivel-ball tapped for the conduit size shown in shop drawings. Hangers shall allow fixtures to swing within an angle of 45 degrees. Brace pendant fixture hangers within 2-inches above the new ceiling main runners and cross tees as provided in shop drawings to limit swinging and interference with new ceiling system. Single-unit suspended fluorescent fixtures shall have twin-stem hangers. Multiple-unit or continuous row fluorescent fixtures shall have a tubing or stem for wiring at one point and a tubing or rod suspension provided for each unit length of chassis, including one at each end.

2.6 REQUIREMENTS FOR INDIVIDUAL LIGHTING FIXTURES

A. Fixture Type: Match existing when replacement is necessary.

1. Manufacturers: Match existing or University approved equal.
2. Submit sample of alternate for University approval, if existing is unavailable.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Lighting fixtures: Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.

B. Suspended Lighting Fixture Support:
1. Pendants and Rods: Brace to limit swinging just above finished ceiling and provide grommet in ceiling tile to allow for movement. Suspended light fixture support components shall not fasten to or penetrate new ceiling main runners and cross tees.

C. Electrical installations shall conform to IEEE C2, NFPA 70, and to the manufacturers written requirements.

D. Upon completion of installation, verify that equipment is properly installed, connected, and adjusted. Conduct an operating test to show that equipment operates in accordance with requirements of this section, the drawings, and university standards.

3.2 FIELD QUALITY CONTROL

A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.

B. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.
