Ballast assembly in the lighting fixture, transportation, and on-site storage shall not exceed 12 months, thereby permitting 4 years of the ballast 5 year warranty to be in service and energized. The warranty shall state that the malfunctioning ballast shall be exchanged by the manufacturer and promptly shipped to the using facility. The replacement ballast shall be identical to, or an improvement upon, the original design of the malfunctioning ballast.

PART 2 - PRODUCTS

2.1 LIGHTING FIXTURES AND COMPONENTS, GENERAL REQUIREMENTS

A. Lighting Fixtures: Clean and repair all existing fixtures and components to like-new condition. Replace existing fixtures and components which cannot be satisfactorily repaired with units that match original design.

B. Metal Parts: Free of burrs and sharp corners and edges.

C. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.

D. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.

E. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:

1. White Surfaces: 85 percent.
2. Specular Surfaces: 83 percent.
3. Diffusing Specular Surfaces: 75 percent.
4. Laminated Silver Metallized Film: 90 percent.

F. Plastic Diffusers, Covers, and Globes:

1. Replace damaged units with matching ones that have high resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

a. Lens Thickness: Typically 0.125 inch (3.175 mm) minimum, unless different thickness is indicated by manufacturer.
b. UV stabilized.

2. Glass: Annealed crystal glass, unless otherwise indicated.

G. Electromagnetic-Interference Filters: Factory installed to suppress conducted electromagnetic-interference as required by MIL-STD-461E. Fabricate lighting fixtures with one filter on each

ballast as provided on original installation. (Note: These filters are required only on new ballasts and only if provided in original installation.)

2.2 FLUORESCENT LAMP ELECTRONIC BALLAST

A. Fluorescent fixtures shall have electronic ballasts unless specifically indicated otherwise, UL 1598.

B. The electronic ballast shall as a minimum meet the following characteristics:

1. Ballast shall comply with UL 935, ANSI C82.11, NFPA 70, and CEC Title 24.
2. Sound Rating: A.
3. Total Harmonic Distortion Rating: Less than 15 percent.
4. Transient Voltage Protection: IEEE C62.41, Category A or better.
5. Lamp Current Crest Factor: 1.5 or less.
6. Power Factor: .90 or higher.
7. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for non-consumer equipment.
8. Protection: Class P thermal cutout.
9. Each ballast shall have circuit diagrams and lamp connections displayed on the ballast.
10. Ballasts shall be designed for the wattage of the lamps used in the indicated application.
11. Ballasts shall be designed to operate on the voltage system to which they are connected.

2.3 EMERGENCY LIGHTING UNITS AND EXIT SIGNS

A. Description: Self-contained units complying with UL 924 for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.

1. Battery: Sealed, maintenance-free, lead-acid type.
2. Charger: Fully automatic, solid-state type with sealed transfer relay.
3. Operation: Relay automatically turns lamp on when power supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
5. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
6. Wire Guard: Heavy-chrome-plated wire guard protects lamp heads or fixtures.
7. Integral Time-Delay Relay: Holds unit on for fixed interval of 15 minutes when power is restored after an outage.
8. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
9. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.

2.4 LABLES AND FINISH

A. Provide labeled luminaires in accordance with UL 1598 requirements. All luminaires shall be clearly marked for operation of specific lamps and ballasts according to proper lamp type. All markings related to lamp type shall be clear and located to be readily visible to service personnel. Ballasts shall have clear markings indicating multi-level outputs and indicate proper terminals for the various outputs.

B. Electrical equipment shall have factory-applied painting systems which shall, as a minimum, meet the requirements of NEMA 250 corrosion-resistance test.

2.5 LIGHTING FIXTURE SUPPORT COMPONENTS

A. Provide all necessary new hardware to install and secure lighting fixtures with fixture supports for conditions indicated on drawings. Each fixture to have a short pigtail with appropriate plug. A mating receptacle will be installed near each fixture to plug fixture into. This will allow easy removal of fixture for maintenance at floor level rather than from ladder

B. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.

C. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

D. Suspended fixtures: Provide hangers capable of supporting twice the combined weight of fixtures supported by hangers. Provide with swivel hangers to ensure a plumb installation. Hangers shall be cadmium-plated steel with a swivel-ball tapped for the conduit size shown in shop drawings. Hangers shall allow fixtures to swing within an angle of 45 degrees. Brace pendant fixture hangers within 2-inches above the new ceiling main runners and cross tees as provided in shop drawings to limit swinging and interference with new ceiling system. Single-unit suspended fluorescent fixtures shall have twin-stem hangers. Multiple-unit or continuous row fluorescent fixtures shall have a tubing or stem for wiring at one point and a tubing or rod suspension provided for each unit length of chassis, including one at each end.

2.6 REQUIREMENTS FOR INDIVIDUAL LIGHTING FIXTURES

A. Fixture Type: Match existing when replacement is necessary.

1. Manufacturers: Match existing or University approved equal.
2. Submit sample of alternate for University approval, if existing is unavailable.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Lighting fixtures: Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.

B. Suspended Lighting Fixture Support:

1. Pendants and Rods: Brace to limit swinging just above finished ceiling and provide grommet in ceiling tile to allow for movement. Suspended light fixture support components shall not fasten to or penetrate new ceiling main runners and cross tees.

C. Electrical installations shall conform to IEEE C2, NFPA 70, and to the manufacturers written requirements.

D. Upon completion of installation, verify that equipment is properly installed, connected, and adjusted. Conduct an operating test to show that equipment operates in accordance with requirements of this section, the drawings, and university standards.

3.2 FIELD QUALITY CONTROL

A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.

B. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.
